EDUCATION

University of Waterloo

Sept. 2024 – Apr. 2029

Candidate for Bachelor of Computer Science

Waterloo, ON

- **GPA:** 3.95
- Recipient of Mathematics National Scholarship + President's Scholarship of Distinction
- **Relevant Coursework:** Probability, Algorithms and Data Abstraction, Object-Oriented Software Development

WORK EXPERIENCE

Full Stack Developer

Jan 2026 – Apr. 2026

SS & C Technologies

Toronto, ON

- Reduced NiFi pipeline configuration overhead by **20%** across **30+** shared data pipelines by developing a composite-key lookup service in **Java** with auto-derived query construction and Expression Language support, eliminating per-table column maintenance
- Built and customized **10+** reusable **Angular** components for an enterprise internal platform, enforcing accessibility standards and consistent UI/UX patterns across the application
- Engineered optimized **GraphQL** queries to fetch and transform data from internal services, reducing frontend data-loading latency by **40%**

Credit Risk Data Analyst

May 2025 – Aug. 2025

Royal Bank of Canada

Toronto, ON

- Built and deployed a full-stack **Streamlit** dashboard for directors featuring interactive **Altair** visualizations and real-time filtering across **10+** risk segmentations, reducing portfolio analysis time from **2+ hours to 30 minutes**
- Developed **Python** ETL and data computation pipelines using **Pandas** and **NumPy** to clean, merge, and aggregate large-scale credit risk datasets
- Replaced legacy **SAS** monitoring scripts with optimized **Python** workflows, reducing manual processing time from **2 hours to 2 minutes** and saving thousands in annual licensing costs
- Built a **Python** scraper and API ingestion tool (**BeautifulSoup**, **requests**) to automate real-time loan rate collection, eliminating manual entry and improving data accuracy

TECHNICAL PROJECTS

Resume Matcher | *React, Tailwind, Node.js, Express, Google Gemini API*

Jan. 2026 - Present

- Built FitCheck, a full-stack AI resume analysis tool that parses PDF and DOCX files and uses **Google Gemini API** to return a structured compatibility score (0–100) with categorized breakdowns across skills, experience, education, and keywords
- Engineered a **prompt engineering** pipeline with temperature-tuned inference (0.2 for deterministic JSON scoring, 0.4 for cover letter generation), enforcing structured output schemas and prompt injection safeguards for consistent results
- Developed an on-demand cover letter generation feature that contextually grounds output in the user's resume and target job description, producing role-specific letters through a separate optimized LLM prompt chain

Video Game Sale Predictor | *Python, Scikit-learn, React, ITAD API*

Jan. 2026

- Built MYST, a full-stack web application that predicts the probability of a video game going on sale within a defined time window based on historical pricing patterns
- Collected and engineered features from the **IsThereAnyDeal (ITAD) API**, including historical price trends, discount frequency, seasonal cycles, publisher patterns, and time-since-last-sale
- Trained and tuned a **Random Forest Classifier** using **Scikit-learn**, performing cross-validation and hyperparameter optimization to improve prediction accuracy and reduce overfitting

SKILLS

Languages: Python, Java, C/C++, Bash, SQL, HTML5, CSS3, JavaScript, TypeScript

Frameworks: React, Angular, Node.js, Express, Tailwind

Data & ML: Pandas, NumPy, Scikit-learn, BeautifulSoup, Streamlit, Altair

Developer Tools: Git, Apache NiFi, GraphQL, OAuth 2.0
